C10 T1 P3 The Psychology of Innovation

27. The example of the 'million dollar quartet' **underlines** the writer's point about
A. recognising talent.
B. working as a team.
C. having a shared objective.
D. being an effective leader.

原文：For Robert B. Cialdini, Professor of Psychology at Arizona State University, one reason that companies don't succeed as often as they should is that innovation starts with recruitment. Research shows that **the fit between an employee's values and a company's values** makes a difference to what contribution they make and whether, two years after they join, they're still at the company. Studies at Harvard Business School show that, although some individuals may be more creative than others, almost every individual can be creative in the right circumstances.

One of the most famous photographs in the story of rock'n'roll **emphasises** Cialdini's views. The 1956 picture of singers Elvis Presley, Carl Perkins, Johnny Cash and Jerry Lee Lewis jamming at a piano in Sun Studios in Memphis tells a hidden story. Sun's 'million-dollar quartet' could have been a quintet.

A. inspire creative thinking.
B. generate concise writing.
C. promote loyalty to a group.
D. **strengthen commitment to an idea**.

原文： Writing, visualising and prototyping can stimulate the flow of new ideas. Cialdini cites scores of research papers and historical events that prove that even something as simple as writing **deepens** every individual's **engagement in the project**. It is, he says, the reason why all those competitions on breakfast cereal packets encouraged us to write in saying, in no more than 10 words: 'I like Kellogg's Corn Flakes because… 'The very act of writing makes us more likely to believe it.

C10 T4 P3 When evolution runs backwards

27. When discussing the **theory developed by Louis Dollo**, the writer says that
A. it was immediately referred to as Dollo's law.
B. it supported the possibility of evolutionary throwbacks.
C. **it was modified by biologists in the early twentieth century**.
D. it was based on many years of research.

原文：…a Belgian palaeontologist called **Louis Dollo** was studying fossil records and coming to the opposite conclusion. In 1890 he **proposed that evolution was irreversible**: that '**an organism is unable to return, even partially, to previous stage already realized in the ranks of its ancestors'.** Early 20th-century biologists came to a similar conclusion, **though they qualified it in terms of probability**, stating that there is no reason why evolution cannot run backwards – it is just very unlikely.

C13 T1 P3 Artificial Artists

Can computers really create works of art?

27. What is the writer suggesting about computer-produced works in the first paragraph?
A. People s acceptance of them can vary considerably.
B. **A great deal of progress has already been attained in this field**.
C. They have had more success in some artistic genres than in others.
D. The advances are not as significant as the public believes them to be.

原文：The Painting Fool is one of a growing number of computer programs which, so their makers claim, possess **creative talents**. Classical music by an artificial composer has **had audiences enraptured**, and even tricked them into believing a human was behind the score.

Artworks painted by a robot have **sold for thousands of dollars** and been **hung in prestigious galleries**. And software has been built which **creates art that could not have been imagined by the programmer**.

A. It is aesthetically inferior to human art.

B. It may ultimately supersede human art.

C. **It undermines a fundamental human quality**.

D. It will lead to a deterioration in human ability.

原文：Human beings are the only species to perform sophisticated creative acts regularly. If we can break this process down into computer code, where does that leave human creativity? This is a question at **the very core of humanity**, says Geraint Wiggins, a computational creativity researcher at Goldsmiths, University of London. **It scares a lot of people**. 11 The Dutch **took over** the cinnamon trade from the Portuguese as soon as they arrived in Ceylon.
答案：FALSE

原文：When the Dutch arrived off the coast of southern Asia at the very beginning of the 17th century, they set their sights on displacing the Portuguese as kings of cinnamon. The Dutch allied themselves with Kandy, an inland kingdom on Ceylon. In return for payments of elephants and cinnamon, they protected the native king from the Portuguese. By 1640, the Dutch **broke the 150-year Portuguese monopoly** when they overran and occupied their factories. By 1658, they had permanently expelled the Portuguese from the island, thereby **gaining control of** the lucrative cinnamon trade.

A it was the first successful way of assessing happiness.

B it established a connection between work and psychology.

C it was the first successful example of psychological research.

D it involved consideration of the rights of consumers.

原文：Alternatively, money could be used as the standard for quantification: if two different goods have the same price, it can be claimed that they produce the same quantity of pleasure in the consumer. Bentham was more attracted by the latter measure. By associating money so closely to inner experience, Davies writes, Bentham '**set the stage for the entangling of psychological research and capitalism that would shape the business practices of the twentieth century**'.

Guard rails were introduced on British roads to **improve** the 7…….. of pedestrians, while **ensuring** that the **movement** of 8…….. **is not disrupted**. Pedestrians **are led to** access points, and encouraged to cross **one** 9…….. **at a time**.

An unintended **effect** is to create psychological **difficulties** in crossing the road, particularly for **less** 10…….. **people**. Another result is that some people cross the road in a 11…….. way. The guard rails **separate** 12……..,and **make it more difficult** to introduce forms of transport that are 13…….. .

原文：The guard rails that will be familiar to anyone who has attempted to cross a British road, for example, were an engineering **solution** to pedestrian safety based on models that **prioritise** the **smooth flow** of traffic. On wide major roads, they often **guide** pedestrians to specific crossing points and slow down their progress across the road by using staggered access points to divide the crossing into two - **one for each** carriageway. In doing so they make crossings feel longer, introducing psychological **barriers** greatly **impacting those that are the least** mobile, and encouraging others to make dangerous crossings to get around the guard rails. v What makes the device different from alternatives

原文： I The Desolenator can produce 15 litres of drinking water per day, enough to sustain a family for cooking and drinking. Its main selling point is that **unlike standard desalination techniques, it doesn't require a generated power supply: just sunlight.** It measures 120 cm by 90 cm, and is easy to transport, thanks to its two wheels. Water enters through a pipe, and flows as a thin film between a sheet of double glazing and the surface of a solar panel, where it is heated by the sun. The warm water flows into a small boiler (heated by a solar-powered battery) where it is converted to steam. When the steam cools, it becomes distilled water. The device has a very simple filter to trap particles, and this can easily be shaken to remove them. There are two tubes for liquid coming out: one for the waste - salt from seawater, Aluoride, etc. - and another for the distilled water. The performance of the unit is shown on an LCD screen and transmitted to the company which provides servicing when necessary.

x The number of people affected by water shortages

原文：**A recent analysis found that at least two-thirds of the world's population lives**

with severe water scarcity for at least a month every year. Jansen says that by 2030 half of the world's population will be living with water stress - where the demand exceeds the supply over a certain period of time. 'It is really important that a sustainable solution is brought to the market that is able to help these people, he says. Many countries "don't have the money for desalination plants, which are very expensive to build. They don't have the money to operate them, they are very maintenance intensive, and they don't have the money to buy the diesel to run the desalination plants, so it is a really bad situation.

iv The range of potential customers for the device

原文：**The device is aimed at a wide variety of users -;from homeowners in the developing world who do not have a constant supply of water to people living off the grid in rural parts of the US.** The first commercial versions of the Desolenator are expected
to be in operation in India early next year, after field tests are carried out. The market for the self-sufficient devices in developing countries is twofold - those who cannot afford the money for the device outright and pay through microfinance, and middle-income homes that can lease their own equipment. *People in India don't pay for a fridge outright; they pay for it over six months. They would put the Desolenator on their roof and hook it up to their municipal supply and they would get very reliable drinking water on a daily basis, Jansen says. In the developed world, it is aimed
at niche markets where tap water is unavailable - for camping, on boats, or for the military, for instance.

Which TWO of the following statements does the writer make about the discoveries of Barrett's team?

A Artefacts found in the higher mountain passes were limited to skiing equipment.

B Hunters went into the mountains even during periods of extreme cold.

C The number of artefacts from certain time periods was relatively low.

D Radiocarbon dating of artefacts produced some unreliable results.

E More artefacts were found in Oppland than at any other mountain site.

原文:

Barrett's team radiocarbon-dated 153 of the artefacts and compared those dates to the timing of major environmental changes in the region - such as periods of cooling or warming —and major social and

economic shifts - such as the growth of farming settlements and the spread of international trade networks leading up to the Viking Age. They found that some periods had produced lots of artefacts, which indicates that people had been pretty active in the mountains during those times. But there were **few or no signs of activity during other periods**.

What was surprising, according to Barrett, was the timing of these periods. Oppland's mountains present daunting terrain and in periods of extreme cold, glaciers could block the higher mountain passes and make travel in the upper reaches of the mountains extremely difficult. Archaeologists assumed people would stick to lower elevations during a time
like the Late Antique Little Ice Age, a short period of deeper-than-usual cold from about 536-600 CE. But it turned out that hunters **kept regularly venturing** into the mountains even **when the climate turned cold**, based on the amount of stuff they had apparently dropped there.

Which TWO of the following statements does the writer make about the Viking Age?

A Hunters at this time benefited from an increased demand for goods.

B The beginning of the period saw the greatest growth in the wealth of Vikings.

C Vikings did not rely on ships alone to transport goods.

D Norwegian towns at this time attracted traders from around the world.

E Vikings were primarily interested in their trading links with the Middle East

原文：

Many of the artefacts Barrett's team recovered date from the beginning of the Viking Age, the 700s through to the 900s CE. Trade networks connecting Scandinavia with Europe and the Middle East were expanding around this time. Although we usually think of ships when we think of Scandinavian expansion, these recent discoveries show that **plenty of goods travelled on overland routes**, like the mountain passes of Oppland. And growing Norwegian towns, along with export markets, would have created **a booming demand** for hides to fight off the cold, as well as antlers to make useful things like combs.
